

I am far from the Sun,
very cold and small

some astronomers don't
think I'm a planet at all.

People, plants and pets
inhabit my land.

My atmosphere protects
and my oceans are grand.

I'm so large that all other
planets could fit inside.

To **be sure** to find me, use
my **red spot** as your guide.

My blue-green colour and
rings are part of my fame.

I rotate sideways, please
don't make fun of my name

I am a windy gas giant far
from the Sun.

Between Uranus and Pluto
There is only one.

I have ice caps at my
north and south poles.

Red is my colour and I'm
covered with "holes".

I orbit quickly and close
to the Sun.

Planets smaller than me?
There is only one.

The only planet rotating
in this direction.

My very thick clouds give
my surface protection.

Thousands of rings are
my claim to fame.

Just beyond Jupiter you
know me by name.

The largest object in the
Solar System am I.

Orbiting around me all
nine planets "fly".
